Mr. Paul Smith June 12, 1968

H. Wakeham

Listing of "Chemical Constituents in Tobacco and Smoke"

Further to our recent discussion with respect to our making a contribution to the various subjects under study by Arthur D. Little for the tobacco industry ad hoc committee, we have sent to Dr. Kensler, as per the attached correspondence, a copy of our compendium of "Chemical Constituents in Tobacco and Smoke." An extra copy is sent herewith to you so that you may examine it and pass it on to Alex Holtzman.

A review of this compendium shows that of the 869 compounds listed 34 have been identified by Philip Morris, and are not, to the best of our knowledge, reported in the literature. Most of these 34 substances are present in extremely minute quantities and, to the best of our knowledge, do not represent any kind of a health hazard in smoke.

I am also sending a copy of this listing to Dr. Murray Senkus for his use in connection with the subgroup which he heads for the Less Hazardous Cigaret Working Group.
